ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a chronic renal failure-improving agent which contains lactic bacillus preparation as an active ingredient, improves the enterobacterial flora in dialysis patient, inhibits the formation of intestinally spoiled product and reduces indoxyl sulfate as a toxic component in uremic poisoning in blood.

SOLUTION: This improving agent contains a lactic bacillus

preparation as an active ingredient. As a lactic bacillus preparation, are cited the Bifidobacterium, lactomin or Lactobacillus preparation outside the Pharmacopoeia standards. In an embodiment, for example, a commercially available antibiotic resistant Lactobacillus preparation containing 1×10^8 cfu of Bifidobacterium infantis, of Lactobacillus acidophilus and of Enterococcus faecalis, respectively, and totally 3×10^8 cfu/capsule is used.
